Test Plan

1. Introduction

1.1 Purpose

The purpose of this document is to provide in detailed test reporting and findings after the test of CRUD features involved in the BBlog- web application project. The test report is a vision of what the testing team has achieved posttests with the help of test management open source software.

The purpose of the Test report is to state all results after testing of automated features and by gather all of the information necessary to predict the state of quality of the functions of the site and control the test effectiveness for a given iteration.

1.2 Scope

The Scope of this Test Report is to derive results of a automated Login and Logout Feature only for this iteration of assignment to meet the target deliverable of assignment for BBlog- web application.

Automation Testing: Involved creation and running automated tests to ensure that the user interface performs Login-Logout functionalities of web application as intended.

1.3 Intended Audience

The BBlog-Web Application Test Plan is targeted and has been elaborated for the following groups of people:

- Software Developers
- Product Owners
- Future Developers maintaining the system
- QA Test Teams

2. Test cases Automated and Tested

2.1 Outline of Test Features Inclusions Covered in a single (Login-Access Web content - Logout) Scenario

The following high level feature groups will be tested during the course of this iteration:

- 2.1.1 BBlog – Web application Landing Page – Executed - Automated - Passed
- 2.1.1 BBlog – Web application Sign-In Page. – Executed - Automated - Passed
- 2.1.2 BBlog – Web application Home Page – Executed - Automated - Passed
- 2.1.3 BBlog – Web application Settings-Profile Page. – Executed - Automated - Passed

2.2 Outline of Test Exclusions

- Remaining testcases for next iteration cycle.

3. Test Approach

Test

3.1 User Interface Testing

Definition:

BBLOG - SOCIAL BLOGGING SITE	Version: 1.0
<Iteration/ Master> Test PlanReport	Date: 03/07/21
Test Report document	

UI testing is the verification that the user interface performs as intended.

Participants:

The participants in user interface testing are the QA Testers.

Methodology:

Using **Selenium**, a UI testing **open-source framework from Apache License 2.0**, automated scenarios are executed which drive a web browser to interact with the application. This allows for the automated verification of the proper functionality provided by the user interface.

4. Test Cases Passed

4.1 Test Execution Results Table

Test cases covered in Scenario	Automated-Execution	Result
BBlog – Web application Landing Page	Executed	Passed
BBlog – Web application Sign-In Page	Executed	Passed
BBlog – Web application Home Page	Executed	Passed
BBlog – Web application Settings-Profile Page.	Executed	Passed

In this document, the test results are customized only for executed testcases for BBlog-web application is covered and documented. For better brief coverage of test cases and in detailed compact test plan document. Test case document is separately created to project root.

5. Approvals:

5.1 Created By: Maninder Singh

5.2 Date: 03/07/2021

5.3 Signed and approved By: BackBase QA Manager
